

Hunter (Easy)

Objective / Scope

You are an operator for the **Hack Smarter Red Team**, currently conducting a black-box assessment on a client's external login portal. As part of the initial reconnaissance phase, our OSINT analysts have compiled a list of potential usernames.

After reading the scope **download the usernames.txt**, Our goal is to identify which one is a valid username for the web application.

Also download the VPN file for the lab and use openvpn to connect to the file and ping to check if its alive.

Recon

In our OSINT we found username and we need to find valid users for the web app so we don't know which port the web app is located so we will use nmap/rustscan to find the port.

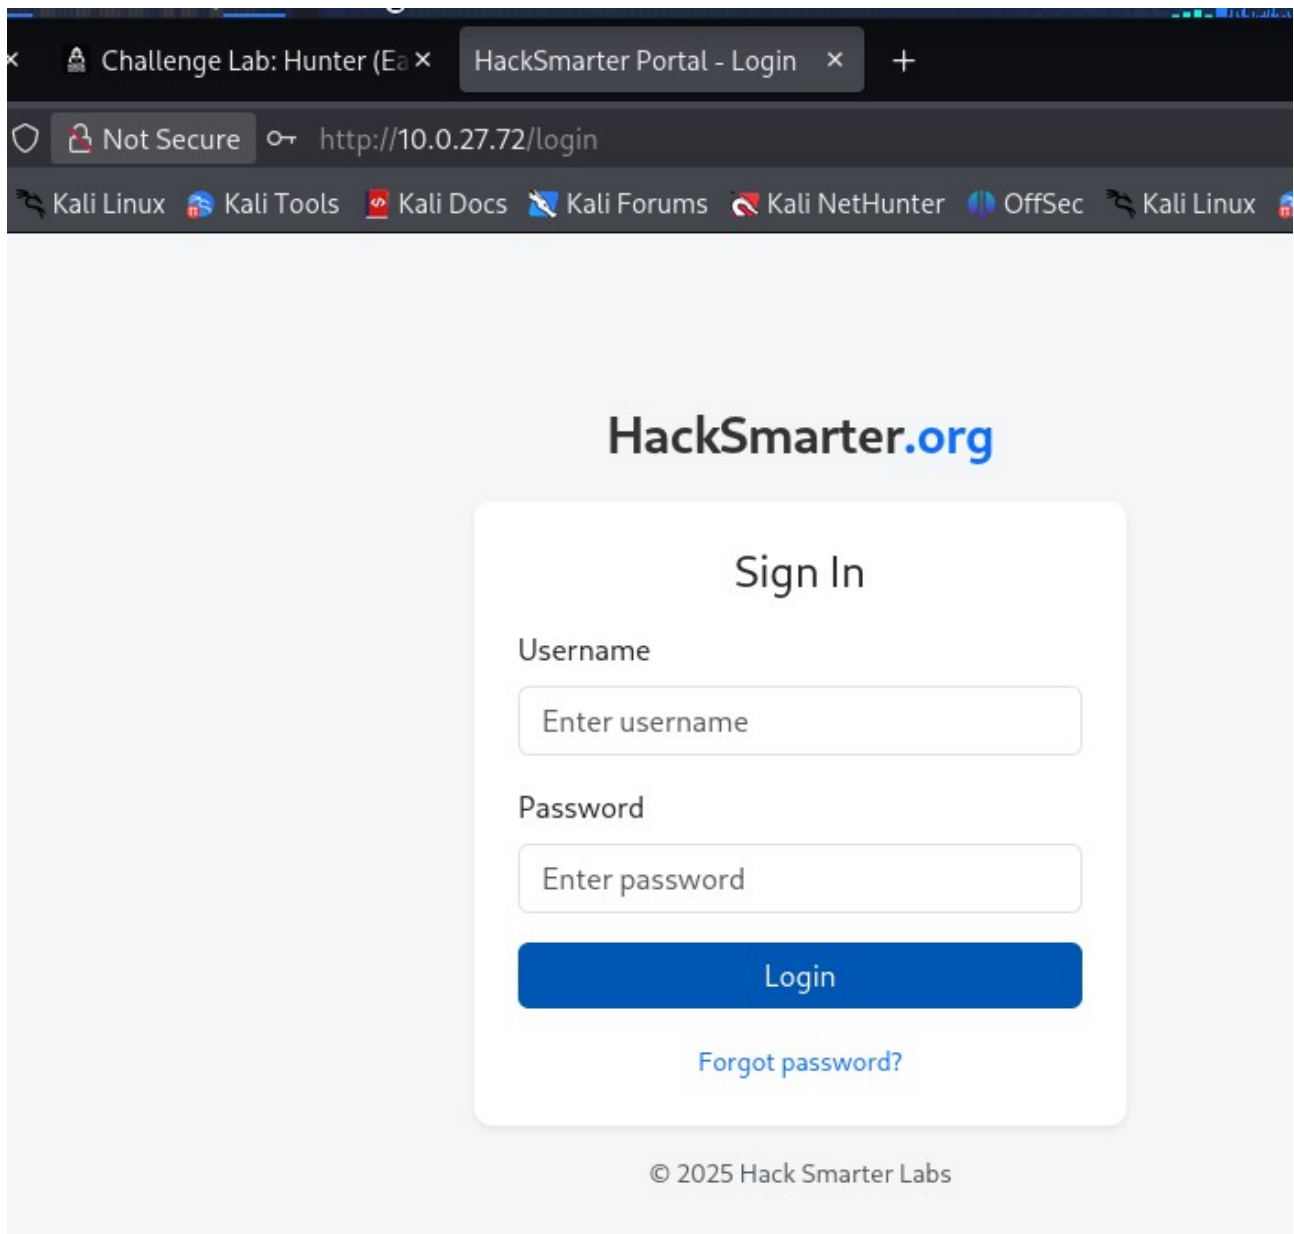

sudo rustscan -a 10.0.27.72 -r 1-65535 --ulimit 5000 -- -A

```
PORT      STATE SERVICE REASON          VERSION
22/tcp    open  ssh      syn-ack ttl 62  OpenSSH 8.9p1 Ubuntu 3ubuntu0.13 (Ubuntu Linux; protocol 2.0)
| ssh-hostkey:
|   256 06:66:ab:e8:63:d2:47:3a:4c:f0:da:27:5e:ed:ab:6c (ECDSA)
| ecdsa-sha2-nistp256 AAAAE2VjZHNhLXNoYTItbmlzdHAyNTYAAAAIbmlzdHAyNTYAAABBBNPKg/W365rQg1LEKV0fcsVQsHpO
6n7Pc9iy87U1SedpsqCaWyMNDWrJvxHdqD/Fmnyah5d0EmJYsLNGTT3zu+c=
|   256 6c:28:e1:35:2f:6c:50:25:60:8a:63:23:24:18:36:f8 (ED25519)
|_ ssh-ed25519 AAAAC3NzaC1lZDI1NTE5AAAAIDdj8LYY0yk0QQ0JVWzJQ4SjQL5RQwZJoImtvofzmShp
80/tcp    open  http      syn-ack ttl 62  Werkzeug httpd 3.1.4 (Python 3.10.12)
|_ http-methods:
|_ Supported Methods: OPTIONS GET HEAD
|_ http-server-header: Werkzeug/3.1.4 Python/3.10.12
|_ http-title: HackSmarter Portal - Login
Warning: OSScan results may be unreliable because we could not find at least 1 open and 1 closed port
Device type: general purpose
Running: Linux 4.X
OS CPE: cpe:/o:linux:linux_kernel:4.15
OS details: Linux 4.15
```

Port 22 (SSH) and 80 (HTTP) are open , The web server is **Werkzeug 3.1.4 Running Python 3.10.12** .

Port 80

Check The Web application it takes me to the Login page in ,I tried to Enter random username like admin etc but I don't get any response saying I entered a Wrong Username or password.

I used Caido Proxy so I can check if there is any request that I am missing You can use other Proxies like Burp Suite.

Functionalities

The website has 2 functionalities The **login page** and the Forgotten **Password page**.

Testing Forgot Password I got Atleast a verbose “**If an account matches that username, a reset link has been sent to the email on file.**”

Reset Password

If an account matches that username, a reset link has been sent to the email on file.

Username

Send Reset Link

I used Caído's Automate tool to Automate the username enumeration. There are a few ways of Username Enumeration: Checking the Status Code if it's 302 Redirect or The length and the Round Trip Time. So I checked the last one with Round-trip Time over 1000, meaning they were taking longer than the others to process. If the user doesn't exist, it quickly finishes the Request; if not, it takes a little time to process and Joey is the valid user.

ID	Payload 1	Status	Length	Round-trip Time (ms) ▼	
157	alex	200	2160	1837	
158	jon	200	2160	1826	
87	phillip	200	2160	1685	
100	joey	200	2160	1537	
147	marcus	200	2160	976	
88	todd	200	2160	970	
224	roland	200	2160	967	
138	ricky	200	2160	958

What is the valid username?

25 points

joey

✓ Correct

I have stopped the machine to keep costs low for everyone!

10 points

- ☐ Yes
- ☐ No

Submit

Finished the lab.
